

Keeping you connected to the DGR: A New Year's Message

Marie Wilson

Work programs in support of the Regulatory Approvals Process for Ontario Power Generation (OPG)'s proposed Deep Geologic Repository (DGR) Project for low and intermediate level waste (L&ILW) came to a successful conclusion in 2010. As we enter the new year, we do so confident in the knowledge that the results of the EA for the DGR Project are favourable and as expected.

The DGR Project is now moving into the next phase with the submission of the Environmental Impact Statement (EIS) and the Preliminary Safety Report (PSR) to the Joint Review Panel in 2011. Both of these documents, which reflect over four years worth of investigations, studies and analyses, will be the subject of a public comment period, anticipated to be announced, shortly after submission. The DGR Team enjoyed working with you last year, and as we move through this next step in the regulatory approvals process, we will maintain our visibility and presence in the Bruce area as we encourage questions, comments and discussions about various DGR areas of interest.

We are looking forward to seeing you in the coming year and if you would like to chat, please call 519-368-1639.

For additional information about the DGR Project, you can also visit www.nwmo.ca/dgr.

Health & Prosperity
IN THE NEW YEAR

Best wishes for health and happiness in 2011.
